*Optional

Foliar Spray

Foliar Spray

**For more significant leaf fade, omit CalMag in the final two weeks.

3-5 DAY FLUSH

8 WEEK COMMERCIAL PREMIER

HOUSE & GARDEN NUTRIENTS

PREMIUM NUTRIENTS & ADDITIVES

Additives

Drip Clean uses ionic bonding to bind excess salts that may accumulate, creating a molecule that removes any buildup of minerals in the used system and ensures maximum uptake for the plant. Use Drip Clean throughout the entire life cycle of the plant during the use of nutrients.

Roots Excelurator is a carefully designed formula that provides vigorous and explosive root development. Use at the beginning and until the first weeks of flowering.

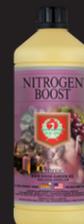

Amino Treatment provides the plant with highly available elements and compounds, supporting explosive growth while helping the plant thrive in all conditions. Amino Treatment should be used from the first week of vegetation until the first signs of fruiting appear.

Multi Zen aids in the breakdown of nutrients, while increasing flower growth. Use in the vegetative phase until the first sign of flower formation.

Algen Extract is a mixture of Norwegian seaweed. Processed in small batches through a cold water extraction, this extract is highly concentrated and full of highly available components. It can be used throughout the life cycle of the plant.

Nitrogen Boost provides the plant with a pure, highly concentrated source of nitrogen, resulting in explosive and vigorous growth. Use from the first week of vegetation to the beginning of flowering, if necessary.

Bud-XL focuses solely on the formation of fruits and flowers. It consists of key components for flowering to facilitate the movement of sugar from the leaves and bracts to the fruits and flowers. This ensures a robust and aromatic yield. Use from the first signs of flowering, fruit and flower formation, to the final rinse.

Nutrient Calculator

Top Booster supports the final phase of fruiting and flowering, providing extra phosphorus and potassium while directing all energy toward the fruit and flower sites.

Shooting Powder helps power a second wave of flower production during the last three weeks of the flowering phase, increasing yields by up to 30%.

Using the fertilization chart accurately is the key to success. Only with close monitoring and complete understanding can the true potential of House & Garden Nutrients be realized. Remember that House & Garden is a very concentrated line, so pay close attention to the measurements and take your time to achieve a proper mix.

William Van De Zwaan
Founder, House & Garden

Top Shooter is the liquid version of Shooting Powder. It causes more flower production and promotes large and robust formations. Use during the last weeks of flowering.

Magic Green is a highly versatile foliar application, which provides the plant with an extra boost of vitality and vigor. Spray 2.5-5 ml per liter once a week or every two weeks.
