

STOCK CONCENTRATION MIXING GUIDE

CALMAG | GROW | BLOOM
3-PART SOLUBLE DRY BASE NUTRIENT

Grow and Bloom Concentrate: 200g/L (757g/Gal) soluble up to 240g/L. **CalMag Concentrate:** 200g/L (757g/Gal) soluble up to 1000g/L.

Step 1 Fill your container of choice with **water to 2/3 the desired final volume.**

- Specific tip goes here to give more detail on how the water should be filtered.
- A second tip can go here around step 1.

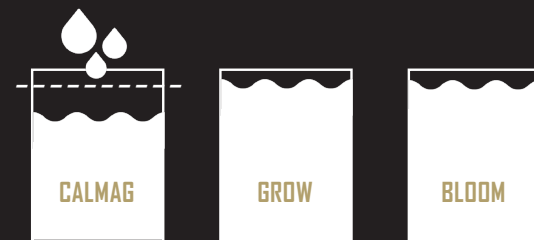

Step 2 Add the **specified amount of CalMag, Grow or Bloom** while stirring to fully dissolve each individually. Do not mix more than one component per stock tank.

- Specific tip goes here to give more detail on how the water should be filtered.

Step 3 Add the **remaining water to the desired final volume** per product.

- Specific tip goes here to give more detail on how the water should be filtered.
- A second tip can go here around step 3.

Step 4 Stir until product is **completely dissolved.**

For concentrated stock tanks we recommend a mixing pump to assist in agitating solution with a concentration above 200g/L.

- Specific tip goes here to give more detail on how the water should be filtered.
