HOUSE & GARDEN NUTRIENTS

PREMIUM NUTRIENTS & ADDITIVES

Base Nutrients

Soil A&B provides balanced nutrition for enriched soils and contains essential nutrients, including a significant amount of calcium.

Aqua Flakes A&B provides the highest quality, fully soluble nutrients designed specifically for recirculating by hydroponic applications. Low ppm base is perfect for ebb and flow, DWC, aeroponics, and any type of rockwool. Also use Aqua Flakes in inert peat mixes for best results.

Cocos A&B is formulated to provide the perfect ratio of nutrients while taking into account the cation-exchange capacity of coir. Coco coir as a medium has unique properties that are distinct from soils and hydroponic media.

Bio 1-Component Soil enables a grower to customize the level of calcium in their soils. Also use it for soils that are heavy in lime.

Commercial Grow delivers base nutrition for all vegetative stages.

Commercial Bloom delivers base nutrition for all flowering stages.

Commercial CalMag delivers secondary elements for all plant stages.

Additives

Drip Clean uses ionic bonding to bind excess salts that may accumulate, creating a molecule that removes any buildup of minerals in the used system and ensures maximum uptake for the plant. Use Drip Clean throughout the entire life cycle of the plant during the use of nutrients.

Roots Excelurator is a carefully designed formula that provides vigorous and explosive root development. Use at the beginning and until the first weeks of flowering.

Amino Treatment provides the plant with highly available elements and compounds, promoting explosive growth while helping the plant thrive in all conditions. Amino Treatment should be used from the first week of vegetation until the first signs of fruiting appear.

Multi Zen (Multizyme) aids in the breakdown of nutrients, while increasing flower knots. Use in the vegetative phase until the first sign of flower formation.

Algen Extract is a mixture of Norwegian seaweed. Processed in small batches through a cold water extraction, this extract is highly concentrated and full of highly available components. It can be used throughout the life cycle of the plant.

Nitrogen Boost provides the plant with a pure, highly concentrated source of nitrogen, resulting in explosive and vigorous growth. Use from the first week of vegetation to the beginning of flowering, if necessary.

Bud-XL focuses solely on the formation of fruits and flowers. It consists of key components for flowering to facilitate the movement of sugar from the leaves and bracts to the fruits and flowers. This ensures a robust and aromatic yield. Use from the first signs of flowering, fruit and flower formation, to the final rinse.

Top Booster triggers the final phase of fruiting and flowering, providing extra phosphorus and potassium while directing all energy toward the fruit and flower sites.

Shooting Powder helps induce a second wave of flower production during the last three weeks of the flowering phase, increasing yields by up to 30%.

Top Shooter is the liquid version of Shooting Powder. It causes more flower production and promotes large and robust formations. Use during the last weeks of flowering.

Magic Green is a highly versatile foliar application, which provides the plant with an extra boost of vitality and vigor while helping to protect it from environmental pressures. Spray 2.5–5 ml per liter once a week or every two weeks.
